### TARGET AUDIENCE

This course is designed for pain practitioners (pain  
specialists, anesthesiologists, neurosurgeons) utilizing  
intrathecal drug delivery for pain management both in  
cancer and non cancer patients. Also interesting for those  
who treat severe spasticity.

Physicians attending the course should have at least 2  
years of practice with ongoing use of Intrathecal drug  
delivery techniques in the treatment of chronic pain and/or  
spasticity patients, and with basic knowledge of spinal  
analgesia using intrathecal drug delivery.

Our gratitude for the collaboration given by the following  
companies:

### OBJECTIVES

After participation in this educational meeting, participants  
should have an understanding of:

1. Basic neuroanatomy related with the performance of  
intrathecal drug delivery
2. Current imaging and neurophysiology relevant for  
performing diagnosis and performing the intrathecal  
drug delivery for pain & spasticity treatment
3. Identify questions that need to be addressed to increase  
knowledge of intrathecal techniques used in chronic pain  
treatment
4. Current indications of Intrathecal drug delivery in chronic  
pain and recommendations for the evaluation and man-  
agement of these pain conditions
5. Evidence-Based recommendations and strategies in the  
patient screening and follow-up, in the management of  
intrathecal drug delivery analgesia
6. Learning Case scenarios for the acquisition of critical  
assessment and management skills

### ACCREDITATION

An Application has been made to the EACCME ® for CME  
accreditation of this event.
