AIM OF THE COURSE and TARGET AUDIENCE

This course will consist of hands-on practice with the cadaver, and interactive sessions. The aim of this course is to provide the participant information and all possibilities pain medicine today provides for the management of patients with chronic pain. The correct diagnosis and appropriate therapeutic selection will be the keys to the success of treatment achieved.

This course is designed for Pain physicians or pain medicine fellows in training (pain specialists, anesthesiologists, neurosurgeons), interested in the practice of pain management, who seek the latest developments in interventional techniques, also seeking CME credit hours and introduction or review of proven interventional techniques. The participants of this course must have basic knowledge of pain medicine and practice of interventional procedures. The course serves to introduce new ways of working, consolidate previously acquired knowledge and teach new procedures to improve the professional capacity of the physician.

We recommend these books as reference preparation

- MA. Reina, J De Andres, A. Hadzic, A. Prats-Galino, X. Sala-Blanch. Atlas of functional anatomy for regional anesthesia and Pain Medicine. Springer, 2015

BY ATTENDING, PARTICIPANT WILL BE ABLE TO:

Physicians should be able to integrate multiple aspects of ultrasound and fluoroscopy in interventional pain management in treating their patients so that patients have better outcomes.

This 2-day hands on cadaver course will promote a better understanding of the anatomy and pathophysiology, involved in chronic pain, and critically review novel state-of-the-art interventional techniques for management of chronic pain. We offer live fluoroscopy-guided and ultrasound-guided workshops covering head upper, lower extremities, trunk and pelvic-perineal procedures.

Each cadaver station is limited to a maximum of 7 participants. C-arms, ultrasonography and state-of-the-art equipment are utilized in this course.

Our faculty consists of internationally renowned experts in the field of interventional techniques.

OBJECTIVES

After participation in this educational meeting, participants should have an understanding of:

- 1.-Basic neuroanatomy related with the performance of pain therapies
- 2.-Identify questions that need to be addressed to increase knowledge of interventional procedures used in pain treatment
- 3.-Perform craneo-facial and spinal procedures of the cervical, dorsal lumbar spine and pelvis.
- 4.-Define the characteristics of an ultrasound image and identify all landmarks of the cervical, lumbar and caudal.
- 5.-Define the principals and standards of an MSK ultrasound examination and perform ultrasound guided MSK injections of the shoulder, trunk, hip and knee.

ACCREDITATION

An Application has been made to the EACCME® for CME accreditation of this event provided by the **European Union of Medical Specialists (UEMS)**

The UEMS-EACCME® has mutual recognition agreements, for live events, with the American Medical Association (AMA) and with the Royal College of Physicians and Surgeons of Canada.
